

Soleneo marini crassioris testæ seu fæminæ. Meer. Nagel-Muscheln die Weiblein.  
 Quomodo à præcedentibus seu maribus differant, iam ex præmissa descriptione patet, præ-  
 sertim quod minimè transparentes sint, et fimbria in limbo extremitatis præfixa ita exter-  
 nè sit magis profunda, et notabilis, deinde interne etiam magis inæqualis et scabrosa.  
 Solen marinus crassioris testæ, seu fæmina, maior, et latior.

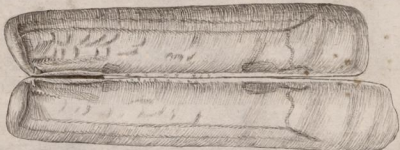

È latere aperturæ representatus.

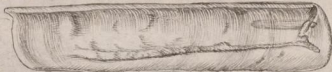

È latere cardinis, seu ligamenti representatus.

Idem concavus representatus, ut ligamentum cum apophysi denticulata appareat.

Idem mediocris internè representatus, ut in extremitate breviori scabrities et fimbriâ in-  
 ducta appareat.

Idem minor externè representatus.
