

Trochites maximus umbilicatus ore ampliore et minus compresso ovato sic. Ex cortice mucroni adhuc adhucrrente videtur fuisse papillulosus, dilute cinerei coloris ad obscuram flavedinem accedens.

Trochus marinus tuberosus ore oblongo compres-
so, quasi quadrato qua-
libet latus in luminitate
tuberculis transversis do-
nata albidus. Trochus al-
bidus maculis rubentibus
distinctus sex minimum spi-
rarum. List. p. 166. tit.
16.

Trochus
marinus mediocris, minor, mini-
mus testa → crassiore sub rotundo, vel potius ovali,
tantillum cornū → presso labioris leviter vespus balin-
labito striatus striis crassioribus secundum spiras iatis, et ma-
culis fuscis eodem suto dispolitis, striisq; transversis obliquis
exornatus, spiris mucronis acutissimis striis crassiore inter se
distinetis, dilute cinerei coloris, ac sub cortice elegantis nito-
ris Margaritarum. Trochus crebris striis fuscis, et transver-
se, et unda- tim dispolitis donatus. List. p. 166.
tit. 16.
